HTML, CSS, Bootstrap	Using these skills to make responsive web pages, design pages with HTML, and give style using CSS and Bootstrap
JavaScript, Advance JS	JavaScript is the most versatile language, most websites use JavaScript and use Advanced JavaScript in their project.
React JS, Node JS(Node Package Manager), Redux, React-router-dom	It is the best framework I have used, I have made many projects using Node Package Manager commands, and Redux for maintaining and updating the Data.
Windows: XP/7/8/10	Working on these operating systems
C, Core Java	I learned about the most basic language

## PROJECTS

### E-commerce Project

- Tools used: **React JS, JavaScript, HTML, CSS, Bootstrap, and useContext hook for API calls.**
- Objective: To make the product listing and click on the product the details will open.
- Functionality: In-cart component, I have made a quantity increase and decrease button to change the quantity, the price of the product will also change according to the quantity
- Also, make the total price, it will give the total amount present in the cart and the checkout button.
- Deployed link:: <https://relaxed-biscuit-902ab6.netlify.app/>

### Ed-Tech Website

- "Ed Tech Website". I have made this website more user-friendly and responsive (Mobile view).
- It contains a form that has sub-course and course selections after selecting a course, the sub-course will show results according to the course selection.

- Technology Used: **React js, React-router-dom, HTML, CSS, Bootstrap, and Material UI.**
- <https://kaleidoscopic-pegasus-baabb7.netlify.app/>

### Search Job Portal

- A job search website that contains a **Navbar, Header component, Footer component, and a cover page/Home Page.**
- I created a working Navlink, e.g.- If the user clicks on Marketing Jobs then marketing-related jobs appear on the page.
- On the Home Page, I made a **routing form** to fill in the required details and have a **previous** and a **next button**
- I'm using **React JS, JavaScript, Bootstrap, HTML, CSS, JSX, React-router-dom, and REDUX**
- <https://lively-clafoutis-5d6758.netlify.app/>

### Covid Registration Form

- I made a form to add all the required details to confirm the appointment for the vaccination
- I created a fully responsive form with authentication of all the input fields
- I use **React JS, JavaScript, HTML, CSS, and JSX.**
- <https://shimmering-sable-1369ac.netlify.app/>

### To-Do List

- I made a form to add the tasks by users and made a **table component** to store the data or studies.
- I created a fully responsive form with authentication of all the input fields
- I use **React JS, JavaScript, Bootstrap, CSS, JSX, and REDUX.**
- <https://tangerine-cranachan-a68234.netlify.app/>

### Amazon Replica

- An E-commerce web page Replica of the Amazon Bestseller home page.
- I made this project only to show my web designing skills.
- I used pure **HTML, CSS, and Bootstrap library** in my project.
- <https://celadon-melomakaron-a68234.netlify.app/>

### Hostel Management System

- It is an Academic project for collecting the data of all the students of the Hostellers.
- My work is to design webpages for projects as I have skills in HTML and CSS.
- It is a teamwork Project, we made this project within 3 Months.
- Proficient with HTML and CSS.

### Log In Authentication Form

- Tools used: React JS, JavaScript, Bootstrap, CSS, JSX, JSON(database)
- Objective: To make a Login Page and then authenticate the email and password to redirect to the dashboard page.
- First I made a JSON file to make the data object after that I made the Login form and a dashboard page and then used javascript to make the authentication code so that it could authenticate the email and password.

### Employee Data Management

- Tools used: React JS, JavaScript, Bootstrap, CSS, JSX, REDUX
- Objective: To make a web page in which we can add, update, and delete data of employees.
- First I made a webpage for Adding the data of the Employee and then I made another webpage in which I created a table to show the data of the Employee, I used the redux components Store, Reducer, and Action.

### LANGUAGES

- 
- English
  - Hindi
